12/16/2015 5:17 PM - Radiology Results Interface**Narrative**

CLINICAL INDICATION: Struck in head and face multiple times. Evaluate for fracture.

TECHNIQUE: Noncontrast CT examination of the paranasal sinuses was performed.

Radiation dose estimate (Total exam DLP): 233.5 mGy-cm.

COMPARISON: No prior studies are available for comparison.

FINDINGS:

There is no acute fracture.

There has been normal formation of the frontal, ethmoid, maxillary, and sphenoid sinuses.

No significant air fluid level or mucosal thickening is seen in either maxillary sinus. The bony margins are maintained. Osteomeatal complexes are patent.

The nasal septum is midline. No significant deviation of the turbinates is seen. Ethmoid sinuses are well pneumatized.

The frontal and sphenoid sinuses are well pneumatized without significant mucosal thickening or air-fluid level.

Visualized orbits and orbital contents are unremarkable. Visualized aspects of the tympanomastoid complexes are also within normal limits. No abnormality is seen in the caudal brain structures.

Impression**IMPRESSION:**

No facial fractures are identified.

I, Kambiz Nael, M.D, have reviewed this radiological study personally and I am in full agreement with the findings presented in this report.

Sensation intact

Skin: Skin is warm and dry. No rash noted. She is not diaphoretic. No erythema. No pallor.

Psychiatric: Her behavior is normal. Judgment and thought content normal.

Nursing note and vitals reviewed.

Assessment/Plan

25 y.o. Female with a PMH of RLE cellulitis years ago now has chronic RLE edema brought in after an assault that occurred PTA. Pt works at the Duane Reade on 125th street. She was opening store by herself when she was physically assaulted. Pt sustained multiple blows to the face and head with a gun, no LOC occurred. Pt was pushed multiple times towards the safe and tripped over a chair twisting left ankle. Pt now with HA, facial pain and L ankle pain. Police were called to the scene and pt was brought here to MSH.

Pt denies fever, chills, CP, SOB, numbness, weakness, N/V/D, abd pain, NO LOC

Exam as above

Assessment:

Physical assault

Facial contusions r/o fx

R/o ICH

L ankle pain r/o fx

Plan:

Xray L ankle

Xray L foot

CT head

CT facial bones

Percocet

Police already here in ED aware of assault

reassess

NONCONTRAST CT OF THE HEAD

CLINICAL INDICATION: Stroke in the head with gun

TECHNIQUE: Noncontrast CT examination of the head was performed using brain and bone algorithms.

Radiation dose estimate (Total exam DLP): 526 mGy-cm.

COMPARISON: None available.

FINDINGS: There is no evidence of mass or intracranial hemorrhage. Ventricles and sulci are normal in size and configuration for the patient's stated age. No midline shift or other significant mass effect is noted. Gray-white differentiation is maintained throughout.

Bone window images demonstrate no evidence of fracture or focal lytic or blastic lesion. The visualized paranasal sinuses and tympanomastoid spaces are clear. There is scattered ossification involving the interhemispheric falx and tentorial leaflets bilaterally, an incidental finding. There is no calvarial fracture.

Impression

IMPRESSION:

No calvarial fracture or intracranial hemorrhage.

I, Kambiz Nael, M.D, have reviewed this radiological study personally and I am in full agreement with the findings presented in this report.

oxyCODONE-acetaminophen (PERCOCET) 5-325 mg tablet
 Directions: Take 1 tablet by mouth every 6 hours as needed for Severe pain. Max Daily Amount: 4 tablets. Take with food
 Start: 12/16/15
 Quantity: 15 tablet Refills: 0

Discharge Instructions

Physical Assault [Adult]

You have been examined today for physical injuries. Because of the emotional upset that happens during a physical assault, you may not be aware of areas of pain or injury until tomorrow. Watch for the signs below.

Following a physical assault, it is normal to feel many strong emotions. Shock, embarrassment, fear, depression, blame, guilt, shame or anger are all very common and normal feelings. For a while, you may find it hard to find a sense of balance in your life. You may not be able to think clearly and you may have strong emotions about what happened to you. This is normal.

It can take time to get back to the point where you feel comfortable and safe again. Crisis intervention and supportive counseling can help you get through this.

Many states require your doctor to notify the law enforcement agency when they treat a victim of a violent crime. This does not mean that you have to prosecute or go to trial. You may be eligible for compensation of medical costs or losses related to the assault. Talk to the local law enforcement agency for details.

Home Care:

- 1) Follow your doctor's advice regarding the care of any physical injuries.
- 2) You may use acetaminophen (Tylenol) or ibuprofen (Motrin, Advil) to control pain, unless another pain medicine was prescribed. [NOTE : If you have chronic liver or kidney disease or ever had a stomach ulcer or GI bleeding, talk with your doctor before using these medicines.]
- 3) Don't isolate yourself. For the next few days, you may prefer to stay with family or a friend for emotional support and a sense of physical safety. Seek out local resources or refer to the links below for more information.

Follow Up

with your doctor or as advised by our staff. Refer to the links below for more information.

1. National Center for Victims of Crime (NCVC) (offers victim services, referrals, articles on victim issues, and other resources) www.ncvc.org , 800-394-2255
2. National Organization for Victim Assistance (NOVA) (articles on victims issues, provides victim assistance, coordinates the National Crime Victim Information and Referral Hotline) www.trynova.org, 800-879-6682

[NOTE: If X-rays were taken, they will be reviewed by a radiologist. You will be notified of any other findings that may affect your care.]

Get Prompt Medical Attention

if any of the following occur:

- New or worsening headache or visual problems
- New or worsening neck, back, abdomen, arm or leg pain
- Shortness of breath or increasing chest pain
- Repeated vomiting, dizziness or fainting
- Excessive drowsiness or unable to wake up as usual
- Confusion or change in behavior or speech, memory loss or blurred vision
- Redness, swelling, or pus coming from any wound

Facial Contusion

A facial contusion is a bruise with swelling. You may also have bleeding under the skin. The swelling should start to go down within 2 days. You don't have any signs of a serious injury at this time. But symptoms may show up later that could be a sign of a more serious problem. You should watch for the warning signs listed below.

Home care

The following guidelines will help you care for your injury at home:

3. If you have swelling of the face, use an ice pack for 20 minutes every 1 to 2 hours until the swelling starts to go down. You can make your own ice pack by putting crushed ice in a plastic bag. Wrap the bag in a thin towel.
4. If you have scrapes or cuts on your face, clean them daily with soap and water. Put an antibiotic ointment or cream on them for the first few days to prevent infection.
5. You may use acetaminophen to control pain, unless another pain medicine was prescribed. If you have chronic liver or kidney disease, talk with your doctor before using this medicine. If this is for your child, talk with the doctor before giving your child any over-the-counter medicine. This is especially true in children younger than 6 months old.
6. For the next 24 hours:
 1. Don't drink alcohol, or use sedatives or medicines that make you sleepy.
 2. Don't drive or operate machinery.
 3. Avoid doing anything strenuous. Don't lift or strain.

Special note on concussions

If you had any symptoms of a concussion today, don't return to sports or other activity that could result in another head injury.

These are symptoms of concussion:

- Nausea
- Vomiting
- Dizziness
